Masamichi Junior Tsukada

[Software Developer | Unity / C# Game & VR Development , Technical Leadership & Software Development]
Ottawa, Ontario K2P1J6 | https://tsukadamas.github.io/ | Tsukada.m@hotmail.com

SUMMARY

Unity and C# software developer specializing in VR/AR, game development, and interactive application development. Experienced in building cross-platform immersive experiences, mobile applications, and educational technology using Unity, React, MySQL, and LMS integrations. Led development teams through the design, prototyping, implementation, optimization, and deployment of interactive systems, including GPS-based applications, procedural gameplay systems, and VR training solutions. Skilled in technical leadership, developer mentorship, and delivering scalable, user-centred software.

EXPERIENCE

D&D Skunkworks – Lead Game Developer – [Remote]
May 2025 – Present

- Led development of a government-funded VR training application using Unity and C#, building interactive learning modules, simulated environments, and scenario-based assessments to train users in identifying and responding to environmental and situational hazards.
- Developed custom Unity and C# authoring tools within a 3D model-based training platform, enabling users to create fully customizable interactive instruction manuals with animated sequences, dynamic part colouring, visual annotations, and guided step-by-step workflows.
- Led end-to-end development of an original VR IP using Unity and C#, driving game concept development, technical architecture, gameplay systems, prototyping, feature implementation, testing, iteration, and production while designing and evaluating new gameplay mechanics and interactive experiences.
- Collaborated with other developers to plan ideas and get a better understanding of existing components, and taught and provided insight to newer and less experienced developers
- Developed a cross-functional educational platform using React, Unity, MySQL, and LMS integrations, enabling teachers and students to create, manage, and play interactive mathematics and language-learning games.
- Architected and implemented backend infrastructure for a web application supporting game creation, content packaging, classroom assignment, and user access.

D&D Skunkworks – Game Developer – [Remote]
Feb 2023 – May 2025

- Developed and maintained project documentation to standardize workflows, improve cross-functional communication, and streamline project handoffs.
- Engineered and refined gameplay systems by implementing core mechanics and player-facing features, improving game dynamics, difficulty balancing, and overall user experience.
- Sourced, screened, and onboarded contract developers using targeted talent acquisition strategies to support team growth and project delivery.
- Reverse-engineered, debugged, and refactored legacy Unity/C# codebases, improving modularity, maintainability, documentation, and readiness for external client handoff.
- Optimized and ported VR applications across Meta Quest 2 and HTC Vive, improving performance, hardware compatibility, and consistency across target devices.
- Collaborated with developers to conceptualize, design, and implement new gameplay features and technical solutions while mentoring junior and intern developers on development practices and code quality.

ePlay Digital – Software Engineer – [Remote]
May 2021 – Jan 2023

- Designed and implemented a mobile unboxing system that rendered interactive 3D and augmented reality (AR) experiences, enabling users to open virtual loot containers and interact with items in an immersive spatial environment.
- Engineered a web-based virtual real estate platform supporting digital asset discovery, purchasing, and ownership management, integrating 3D/VR environments with user authentication, transactional workflows, and NFT functionality.
- Developed a suite of interactive 3D pet components for virtual and augmented reality applications, implementing digital pet purchasing, ownership, animation, and user interaction systems across immersive environments.
- Engineered and published client-facing AR filters using Meta Spark Studio for Instagram, implementing interactive effects and experiences for seasonal campaigns.
- Partnered with external clients to architect, prototype, and develop standalone applications and in-app features, translating product requirements into interactive technical solutions.
- Developed backend APIs using Python and Ruby to integrate external data sources into game and interactive applications, enabling dynamic data retrieval and real-time content integration.
- Designed and implemented algorithms to optimize game systems and application workflows, reducing processing overhead and improving runtime performance and responsiveness.
- Developed a Unity/C# mobile mapping feature that integrated 3D map technology, GPS coordinates, and internal/external datasets to visualize and track user movement in real time.

Greensky Games – VR Game Developer (Contract) – [Remote]
Oct 2022 – Nov 2022

- Implemented a rocket jump/dash movement mechanic for a VR first-person shooting game based on Game Design Document (GDD) specifications, integrating high-mobility movement into the core gameplay system.
- Ensured gameplay features aligned with design intent through close collaboration with designers and senior developers

SKILLS

Languages: Proficient in C#, Unity, HTML/CSS, JavaScript; Familiar with SQL, React, Python, TypeScript.
Software: Game Engines: Unity, Game Maker Studio, Phaser; Other: Figma, Audacity, Gimp, Git, Xcode, AWS.
Soft skills: the ability to work under pressure, the ability to work on multiple projects at once

EDUCATION

Sheridan College - Advanced Diploma in Software Development and Network Engineering - Oakville, Ontario
Sep 2018 – Dec 2021

CERTIFICATIONS

Unity Essentials Pathway
